DETAILED ACTION

Claims 1-7 are pending in the application.

Species Election

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species of oligonucleotides for stimulating an adjuvant or treat related diseases: SEQ ID NO: 3; SEQ ID NO: 4; SEQ ID NO: ; SEQ ID NO: 6; SEQ ID NO: 7 or SEQ ID NO: 8

The species lack unity of invention because the technical feature linking the different species of oligonucleotide which have the shared functional CG motif structure is that they are used as adjuvant or for treating immune related diseases, this technical feature is not a special technical feature as it does not make a contribution over the prior art in view of Krieg et al US 6,207,646 (2001) who teaches that oligonucleotides comprising CpG or 5'CG 3' motifs i.e. the motif 5'X1X2CGX3X43' wherein X2 can be A, G or T and X3 can be C or T can be used as adjuvants or used for treating immune related diseases (column 6, column 11).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
